

**AMENDMENTS TO THE SPECIFICATION**

On page 1, please replace the paragraph beginning at line 23 with the following:

The invention has for its object to provide a file for the type described in the opening paragraph, in which the above disadvantages are avoided, while retaining the advantages thereof. To this end, a file according to the invention is characterized by a front cover, a back cover and a spine manufactured in one piece, preferably by injection molding from plastic, with hinges being co-formed for connecting the covers with the spine, and further including a coupling means having a clamping means, with which an arch can be fixed to one of the covers and/or the spine the features of claim 1.

On page 3, please replace the paragraph beginning at line 12 with the following:

Moreover, the invention relates to a method for presenting files, characterized by covers, each comprising a front cover, a back cover and a spine, interconnected by hinges, in particular integrated hinges, which covers are provided with first coupling means, comprising clamping means, arches further being presented, arranged to fix paper or the like, which arches are provided with second coupling means for cooperation with the first coupling means, in particular the clamping means, the covers and arches being presented apart from each other, such that a cover and at least one arch can be combined to a file directly before use the measures of claim 12.
